PROFILE

Software Engineer specializing in Backend and AI systems, with hands-on experience building scalable backend applications, AI agents, and agent orchestration workflows using Python, Go, FastAPI, Django, LangGraph, CrewAI, and PostgreSQL. Competitive programmer with 1500+ problems solved and Codeforces Specialist, with machine learning research experience.

TRAINING & WORK EXPERIENCE

Software Engineering Intern – W3 Engineers Ltd. | [Certificate](#)

May 2026 – August

Dhaka, Bangladesh

- Built backend systems, full-stack applications, automated test suites, and web scrapers across Python, Django, Go, Beego, React, and Next.js through a project-based engineering rotation covering the full production stack.
- Developed LLM-powered applications and AI agents, including prompt engineering and AI-assisted development workflows, applying software engineering best practices (Docker, version control, testing) throughout.
- Worked with the **Presto team**, focusing on agent orchestration frameworks and AI agent infrastructure in an Agile development environment.

(Django)Web Development Training–Bangladesh Computer Council(EDGE) | [Certificate](#) 2025

- Completed a 3-month, 80-hour hands-on training in Django, backend development, REST APIs, and database integration.

SKILLS

Languages: C/C++, Python, Go, JavaScript, SQL

Backend: Django, Django Rest Framework, FastAPI, Beego

AI Engineering: PyTorch, LangChain, LangGraph, CrewAI, RAG, MCP, Mem0, LangSmith

Frontend: Tailwind CSS, Bootstrap, React, Next.js

Databases & Vector Stores: MySQL, PostgreSQL, Redis, SurrealDB, Qdrant

Infra: Docker, Linux

Testing: Pytest, Postman, JMeter, Playwright

Tools: Git, GitHub Workflow, Notion, LaTeX

AWARDS & ACHIEVEMENTS

Codeforces: Specialist at Codeforces (Max: 1517)

Meta Hacker Cup: Qualified for Round 2

LeetCode: Top 5.3 % in LeetCode (Max: 1867)

CodeChef: 1715 (max)

Breaking Code 2.0, MBSTU: Rank 10th (Team name: Fat Old Sun)

LU Inter University National Hackathon: Honourable mention (Team name: Ryuk and the Apple)

HerWILL: AI for Digital Safety Datathon 2026: Rank 75th (ID: Naimur Rahman)

Solved overall 1500+ problems and participated in 200+ online programming contests across major online judges, including Codeforces, CodeChef, AtCoder, UVA, Vjudge, and SPOJ.

PROJECTS

Travel AI Agent — LangGraph Travel Planner | [GitHub](#)

[Live Demo](#)

- Built an AI-assisted travel planning workspace using FastAPI, LangGraph, Groq, and Next.js that converts conversational trip requests into structured day-by-day itineraries.
- Implemented multi-turn thread continuation, clarification prompts, SSE streaming, parallel research, and human approval workflows.
- **Tech:** Python, FastAPI, LangGraph, LangChain, LangSmith, Groq, Next.js, TypeScript, SSE

MshX — Custom Linux Shell in C | [GitHub](#)

- Built a custom Linux shell in C with command execution, pipelines, logical operators, I/O redirection, glob expansion, variable expansion, background jobs, and command history.
- Designed a tokenizer, parser, AST, and executor pipeline using POSIX system calls such as `fork()`, `exec()`, `pipe()`, and `dup2()`, with dry-run and timeline profiling features.

Kash — Personal Expense Tracker | [GitHub](#)

[Live Demo](#)

- Built a full-stack expense tracker with a Go + Beego REST API and Next.js/TypeScript frontend featuring authentication, protected routes, dashboard summaries, expense CRUD, filtering, sorting, pagination, and guided voice input.
- Implemented configurable storage with CSV as the default local mode and PostgreSQL for production deployment; documented Swagger API and Docker workflow, with 91.3% backend test coverage.
- **Tech:** Go, Beego, Next.js, TypeScript, Tailwind CSS, CSV, PostgreSQL, Docker, Vercel, Render

Haatify — The Online Retailer | [GitHub](#)

[Live Demo](#)

- Full-stack e-commerce platform built with Django featuring product catalog, search, cart, multi-payment checkout (Card, bKash, Nagad, COD), user auth with email verification, and color/size variant pricing. Deployed on Render with PostgreSQL and Cloudinary.
- **Tech:** Python, Django, PostgreSQL, Bootstrap, Cloudinary, Render

RESEARCH EXPERIENCE

Skip Fusion and Robust Checkpoint Selection for Generalisable Polyp Segmentation under Centre and Sequence Shift

First Author, Submitted to ICEFRONT (IEEE Conference), March 2026

- Proposed a gated cross-attention skip-fusion method and a robustness-aware checkpoint selection strategy for generalisable polyp segmentation.
- Conducted experiments on the multi-centre PolypGen dataset under centre-shift and sequence-shift settings, demonstrating improved robustness on unseen-centre sequence data.

EDUCATION

Mawlana Bhashani Science and Technology University

B.Sc. in Computer Science and Engineering; GPA: 3.29/4.00

Tangail, Bangladesh

March 2022 – 2026

CERTIFICATES

Machine Learning Specialization by Stanford University(Coursera) | [Certificate](#)

2025

Completed: Supervised Machine Learning: Regression and Classification, Advanced Learning Algorithms, Unsupervised Learning, Recommenders, Reinforcement Learning

DevOps Mastery Specialization on KodeCloud(Coursera) | *Ongoing*

2026

Completed: DevOps Prerequisite Course, Git Basics for DevOps, Docker Basics for DevOps, Jenkins for Beginners, Kubernetes Basics for DevOps
